Delivery Format: Instructor Led - Online

Course Overview

Data centre facilities operations management have proven to be the key differentiator between a data centre that is performing well or badly.

About This Course

Data centre facilities operations management have proven to be the key differentiator between a data centre that is performing well or badly.

Who Should Attend

The primary audience for this course is anyone who works in and around IT, facilities or data centre operations and needs to understand and improve the daily operations including important processes such as lock-out/tag-out, the right process for installing/de-installing equipment, safety procedures, capacity management and much more.

Learning Outcomes

Upon successful completion of this course, participants will be able to:

The old believe that a fully redundant data centre facility will save the day is no longer true as many research outcomes have revealed that the majority of downtime is caused by the human factor. Policies, processes, procedures and work instructions should be carefully developed, ideally following relevant standards, to ensure an effcient and effective data centre operations which are also compliant to the required regulations.
The CDFOS® (Certified Data Centre Facilities Operations Specialist) course is a three-day course which will enable participants to fully understand the requirements of running the day-to-day operations of a mission critical data centre. Participants will gain all the required competences for running the daily operations, understand which processes should be in place, and the critical elements of those processes and how to execute them. The course is fully aligned with the DCOS® (Data Centre Operations Standard).
