Using Splunk Real User Monitoring (RUM)

Category: AI, Data & Analytics | **Vendor:** Splunk

Duration: 8.00 hours (1 days) **6.5 CPD Hours** **Rating:** ⭐ 4.6 (5,878 reviews)

Course Information

Delivery Format: Instructor Led - Online

Course Overview

This 3-hour virtual course targeted to Developers, DevOps, and SRE’s enables you to use Splunk Real User Monitoring (RUM) to analyze error spans, identify performance bottlenecks, and troubleshoot your front-end user experience of your applications. Through discussions and hands-on activities, explore how to use RUM metrics, built in dashboards, URL grouping, and advanced filtering and searching to assess the health of your front-end and quickly find root cause when problems arise. In this course your will also learn how to link Splunk RUM to Splunk Application Performance Monitoring (APM) to monitor your application from back-end to front-end with application instrumentation.

About This Course

This 3-hour virtual course targeted to Developers, DevOps, and SRE’s enables you to use Splunk Real User Monitoring (RUM) to analyze error spans, identify performance bottlenecks, and troubleshoot your front-end user experience of your applications. Through discussions and hands-on activities, explore how to use RUM metrics, built in dashboards, URL grouping, and advanced filtering and searching to assess the health of your front-end and quickly find root cause when problems arise. In this course your will also learn how to link Splunk RUM to Splunk Application Performance Monitoring (APM) to monitor your application from back-end to front-end with application instrumentation.

Who Should Attend

Developers, DevOps, and SREs.

Prerequisites & Entry Requirements

General Prerequisites:

To be successful, students must have completed these Splunk Education course(s) or have equivalent working knowledge:

- Introduction to Splunk RUM
- Familiarity with navigating Splunk Observability Cloud
- Basic knowledge of visualization and alerting on Splunk IM metrics
